**Interpretation:**

The NMR profile is typical for honey. There were no significant deviations detected according to reference database entries. Regarding the examined parameters the sample corresponds to the legal regulations (Council Directive 2001/110/EC dated Dec. 20th, 2001 relating to honey; Article 1 in connection with Annex II).

Due to a lack of representation of the botanical variety (or significant influences thereof) in the applied Bruker Profiling geog. origin model, the origin could not confirmed by the analysis. Instead, for a verification of geographical origin we recommend a microscopic pollen analysis for this sample.
